Michael Bentley DPhil

MATHEMATICAL BIOLOGY · SCIENTIFIC COMPUTING · TECHNICAL LEADERSHIP

Leeds, UK / michael@symmetriclabs.xyz / LinkedIn: euler-mab / GitHub: euler-mab

Mathematical biologist and technology founder with research experience at Oxford, UCL and Leeds. Co-founder and former CEO of Euler Labs (2020–2026), combining computational modelling, bioinformatics and applied machine learning with protocol design and company leadership. Interested in applying AI to scientific research and translating complex technical ideas into useful products.

INDUSTRY EXPERIENCE

Symmetric Labs — Current

Independent Consultant

Advisory practice focused on protocol design, AI and machine learning strategy, and research-to-product translation.

Euler Labs — 2020–2026

Co-founder & Chief Executive Officer

- Co-founded and led the company behind Euler, a decentralised lending protocol that reached more than $4bn in deposits in 2025.
- Developed original protocol concepts, including the mathematical foundations of its liquidation engine and the credit-based market-making design behind EulerSwap.
- Led the team through the redesign and September 2024 launch of Euler v2, built around modular lending vaults and isolated risk.
- Led Euler through multiple funding rounds, including a $32m token funding round led by Haun Ventures in 2022.

SCIENTIFIC RESEARCH

University of Oxford — 2019–2020

Postdoctoral Research Associate

Microbial ecology and evolution, dynamical systems, and evolutionary game theory.

UCL — 2017–2019

Postdoctoral Research Associate

Evolutionary theory, bioinformatics and machine learning.

University of Leeds — 2016–2017

Postdoctoral Research Fellow

Cancer evolution, bioinformatics and machine learning.

EDUCATION

University of Oxford

DPhil, Mathematical Biology · 2016

Thesis: The dynamical systems theory of natural selection.

University of Leeds

MRes, Bioinformatics and Computational Biology · 2010

Distinction; ranked first in cohort.

Awarded a prize for work developing neural network and individual-based models.

Newcastle University

BSc, Biological Sciences · 2008

First-class honours; ranked first in cohort.

SELECTED RESEARCH

Pleiotropic constraints promote the evolution of cooperation in cellular groups.

Bentley MA et al. · PLOS Biology 2022 · 20(6), e3001626

First author; developed mathematical models and research software combining stochastic simulations with partial differential equations to study the evolution of cellular cooperation.

Research code & reproducible examples

METHODS & EXPERTISE

Computational modelling

Dynamical systems (ODEs/PDEs)
Stochastic simulation
Individual-based modelling

AI & data

Neural networks
Applied machine learning
Bioinformatics

Theory & engineering

Scientific computing
Evolutionary game theory
Protocol and mechanism design
